Guidelines for Managing Malnutrition in Adults in the Community

**ASSESSMENT OF MALNUTRITION RISK**

- Use the Malnutrition Universal Screening Tool (‘MUST’ ) for screening patients (refer to Appendix 1)
- Consider any underlying medical problems e.g. oedema.
- Potential swallowing problems should be taken into account [1]. Refer to Speech and Language Services if appropriate.

**PATIENT IDENTIFIED WITH ‘MUST’ SCORE 1+**

Patient identified at risk of malnutrition using ‘MUST’ tool and requiring oral nutrition support.

**PATIENT DISCHARGED FROM HOSPITAL**

Refer to guidance on Appendix 2

**FIRST LINE NUTRITION SUPPORT: DIETARY ADVICE**

Consider a ‘Food First’ approach

- Provide Guide to Fortifying Meals and Store Cupboard Ideas (see Appendix 3 – Guide for making the most of your food)
- Set realistic goals of nutritional treatment. These may be to improve nutritional status e.g. wound healing, or to reach or maintain agreed weight or to slow the rate of weight loss.
- Tailor advice to individual patient taking into consideration any dietary restrictions e.g. patients with diabetes.
- Review between 1 and 3 months or sooner if condition requires.

**ORAL NUTRITIONAL SUPPLEMENTS (ONS)**

- Consider further nutritional support in addition to fortified diet for patients who require additional energy and protein after following the ‘Food First’ approach for a minimum of four weeks.
- Continue to reinforce ‘Food First’ advice.

Medium risk patient (‘MUST’ SCORE 1) or Advisory Committee on Borderline Substances (ACBS) criteria for supplements NOT met.

**Over-the-Counter (OTC) supplements**

- e.g. Complan®, Meritene®, Nurishment®
- **Monitoring** Monitor patients as recommended on Appendix 1.
  - When the agreed treatment goals are achieved OTC supplements should be discontinued.

High risk patient (‘MUST’ SCORE 2+) AND ACBS criteria met

**Use Pan Mersey Area Prescribing Committee Formulary on Appendix 4 when prescribing sip feeds.**

Unless sip feeds have already been tried and patient preferences established, initially it should be for a **ONE WEEK supply** only or use free sample request.

- If the first trial is not tolerated, then offer alternative sip feed for further one week trial or a different sample.
- After one week, establish patient’s preferred product choice/flavours and prescribe 2 sip feeds per day for a **ONE month** in addition to meals and food fortification advice.
- Prescription should have clear directions for use.
  - **Prescribe on acute prescription only.**
  - Starter packs are not recommended.

**REVIEW**

Review patients as recommended on Appendix 1 using ‘MUST’ tool and check compliance with sip feeds.

When target weight is achieved then reduce sip feeds gradually and continue monitoring the patient for at least 3 months after stopping.

Refer to Appendix 1 on when to refer to Community Dietetic Services.

For further information refer to the malnutrition pathway

**REFERENCES**

Version: 4.1

Review date: Apr 2024

(or earlier if there is significant new evidence relating to this recommendation)
Managing malnutrition using the ‘Malnutrition Universal Screening Tool’ (‘MUST’) and guidance for initiation of sip feeds in adults

- This flow chart does not cover patients under the care of the Dietitian, tube fed or palliative care patients. Individual discussion is required with patient/carer.
- **If the patient has diabetes, ensure that blood sugar levels are managed and monitored accordingly.
- For more detailed information please see: [http://www.malnutritionpathway.co.uk/](http://www.malnutritionpathway.co.uk/)
- ‘MUST’ is adapted / reproduced here with the kind permission of BAPEN (British Association for Parenteral and Enteral Nutrition). BAPEN does not necessarily support the use of any products in particular.

### Step 1 - BMI score

<table>
<thead>
<tr>
<th>BMI kg/m²</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt; 20</td>
<td>0</td>
</tr>
<tr>
<td>18.5 – 20</td>
<td>1</td>
</tr>
<tr>
<td>&lt; 18.5</td>
<td>2</td>
</tr>
</tbody>
</table>

If unable to obtain height and weight, use alternative measurements (see ‘MUST’ tool at [http://www.bapen.org.uk/](http://www.bapen.org.uk/))

### Step 2 - Weight loss score

Unplanned weight loss in past 3-6 months (%)

<table>
<thead>
<tr>
<th>Percentage</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 5 %</td>
<td>0</td>
</tr>
<tr>
<td>5-10 %</td>
<td>1</td>
</tr>
<tr>
<td>&gt; 10 %</td>
<td>2</td>
</tr>
</tbody>
</table>

### Step 3 - Acute disease effect score

If the patient is acutely ill and there has been or is likely to be no nutritional intake for >5 days.

<table>
<thead>
<tr>
<th>Score</th>
<th>NB this step is unlikely to apply outside hospital</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

Add scores together to calculate overall risk of malnutrition

(Check for dysphagia, if needed refer to local Speech and Language Therapy services)

### Score 0

**Low Risk**

No action required
Routine clinical care

Repeat screening either:
- Monthly in care homes
- Annually in community

### Score 1

**Medium Risk**

Observe

1. **Advise on dietary intake:**
   - Encourage small frequent meals and snacks, with high energy and protein food and fluids (see Guide making the most of your food).
   - Care homes document intake for 3 days.
2. **Consider over the counter non-prescribable** powdered supplements: such as Complan®, Meritene®, Nurishment® in between meals**
3. **Repeat screening:** Care homes - review and monitor weight monthly. Community - after 1-3 months according to clinical condition or sooner if the condition requires.
   - If improving continue until ‘low risk’
   - If deteriorating, consider treating as ‘high risk’

### Score 2 or more

**High Risk**

Treat

1. **Advise on dietary intake:**
   - Encourage small frequent meals and snacks, with high energy and protein foods and fluids (see Guide making the most of your food).
   - Care homes document intake for 3 days and monitor weight weekly.
   - Refer to GP to review any treatable weight loss causes including medication and biochemistry.
2. **Consider prescribing or request free sample of** oral nutritional supplements (ONS) 2 daily in addition to oral intake (see formulay for first line ONS)**
   - Monitor response/ requirements for ONS regularly.
3. If no improvement after 4-6 weeks, or more specialist support is required, refer to Dietitian.
4. If improving, continue to monitor requirement for ONS and repeat ‘MUST’ screening every 1 - 3 months.
GP GUIDANCE FOR PATIENTS DISCHARGED FROM HOSPITAL ON SIP FEEDS WITH NO PLANNED DIETETIC FOLLOW UP

Patient identified as high risk

Add sip feed (as per formulary appendix 4) to acute prescription and GP to supply for 4 weeks. In addition to oral intake.

GP to monitor progress at 4-6 weeks post discharge. Check compliance. Weigh patient and calculate ‘MUST’ score (appendix 1).

‘MUST’ 1 or less
1. Stop Sip Feed
2. Reinforce dietary advice to maximise intake. Encourage small frequent meals and snacks, with high energy and protein food and fluids (refer to Appendix 3)
3. Repeat ‘MUST’ screening after 1-3 months according to clinical condition or sooner if the condition requires.

‘MUST’ 2 or more
1. If indicated, continue sip feed, check compliance.
2. If patient is not managing adequate food intake and/or losing weight, refer to Dietitian
3. If Dietetic referral not required, continue to monitor requirement for sip feed and repeat ‘MUST’ screening every 1-3 months.
Guide to making the most of your food – advice for patients and carers

This leaflet provides some simple ideas on how you can get the most nutrition from everyday food you are eating.

# Preferred First line choices of Oral Nutritional Supplements (ONS)

## FIRST LINE: POWDER*

<table>
<thead>
<tr>
<th>Brand</th>
<th>Flavours</th>
<th>Weight</th>
<th>Cost (£)</th>
<th>Energy (kcal)</th>
<th>Protein (g)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foodlink Complete</td>
<td>Strawberry, Chocolate, Vanilla, Banana, Natural</td>
<td>57 g sachet</td>
<td>£0.49</td>
<td>386</td>
<td>18.3</td>
</tr>
<tr>
<td>Aymes Shake</td>
<td>Strawberry, Chocolate, Vanilla, Banana, Neutral</td>
<td>57 g sachet</td>
<td>£0.49</td>
<td>383</td>
<td>19</td>
</tr>
<tr>
<td>Ensure Shake</td>
<td>Strawberry, Chocolate, Vanilla, Banana</td>
<td>57 g sachet</td>
<td>£0.49</td>
<td>389</td>
<td>17</td>
</tr>
</tbody>
</table>

## SECOND LINE: STANDARD READY TO DRINK (RTD) Milkshake Style

<table>
<thead>
<tr>
<th>Brand</th>
<th>Flavours</th>
<th>Weight</th>
<th>Cost (£)</th>
<th>Energy (kcal)</th>
<th>Protein (g)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aymes Complete</td>
<td>Strawberry, Chocolate, Vanilla, Banana</td>
<td>200 ml bottle</td>
<td>£1.05</td>
<td>300</td>
<td>12</td>
</tr>
<tr>
<td>EnergieShake Complete</td>
<td>Vanilla, Chocolate, Strawberry, Banana</td>
<td>200 ml bottle</td>
<td>£1.01</td>
<td>300</td>
<td>12.5</td>
</tr>
<tr>
<td>Ensure Plus</td>
<td>Banana, Chocolate, Coffee, Fruits of the Forest, Neutral, Peach, Raspberry, Strawberry, Vanilla</td>
<td>200 ml bottle</td>
<td>£1.11</td>
<td>300</td>

</tr>
<tr>
<td>Fortisip</td>
<td>Neutral, Vanilla, Chocolate, Toffee, Banana, Orange, Strawberry, Tropical</td>
<td>200 ml bottle</td>
<td>£1.12</td>
<td>300</td>
<td>12</td>
</tr>
</tbody>
</table>

## SECOND LINE: JUICE STYLE (for those who cannot tolerate milky drinks)

<table>
<thead>
<tr>
<th>Brand</th>
<th>Flavours</th>
<th>Weight</th>
<th>Cost (£)</th>
<th>Energy (kcal)</th>
<th>Protein (g)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aymes ActaSolve Smoothie**</td>
<td>Mango, Peach, Pineapple, Strawberry &amp; Cranberry</td>
<td>66 g sachet</td>
<td>£1.00</td>
<td>297</td>
<td>10.7</td>
</tr>
<tr>
<td>Altrajuce</td>
<td>Apple, Blackcurrant, Strawberry, Orange</td>
<td>200 ml tetrapak</td>
<td>£1.70</td>
<td>300</td>
<td>7.8</td>
</tr>
<tr>
<td>Ensure Plus Juce</td>
<td>Lemon &amp; Lime, Apple, Strawberry, Fruit Punch, Peach</td>
<td>220 ml bottle</td>
<td>£1.97</td>
<td>330</td>
<td>10.6</td>
</tr>
</tbody>
</table>

## SECOND LINE: FIBRE BASED

<table>
<thead>
<tr>
<th>Brand</th>
<th>Flavours</th>
<th>Weight</th>
<th>Cost (£)</th>
<th>Energy (kcal)</th>
<th>Protein (g)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foodlink Complete with Fibre*</td>
<td>Strawberry, Chocolate, Vanilla, Banana, Natural</td>
<td>63 g sachet</td>
<td>£0.72</td>
<td>386</td>
<td>18.3</td>
</tr>
<tr>
<td>Fresubin 2kcal Fibre Mini</td>
<td>Chocolate, Vanilla</td>
<td>500ml as 4x125 ml bottles</td>
<td>£1.29 each</td>
<td>250</td>
<td>12.5</td>
</tr>
<tr>
<td>Ensure Plus Fibre</td>
<td>Chocolate, Raspberry, Strawberry, Banana, Vanilla</td>
<td>200 ml bottle</td>
<td>£2.19</td>
<td>310</td>
<td>13</td>
</tr>
</tbody>
</table>

*Mix sachet with 200 ml whole milk **Mix 66 g sachet with 150 ml water

List of flavours is not exhaustive. Limit to 2 flavours on prescription. All prices correct at the time of writing. (NHS BSA dm+d browser accessed 23.2.21)

Please NOTE: These supplements may not be appropriate for patients with Dysphagia or other medical conditions/special diets. In this situation, please check with local Dietetics/Speech & Language Therapy Team or make a referral.

- Monitor weight at least every 3 months. **Prescribe as 2 per day on acute prescription.**
- Do not prescribe starter packs as they are expensive. Either prescribe acute short-term prescription as a trial, e.g. 1 week OR use free online “direct to patient sample service” from manufacturer (contact by health care professional only). Then prescribe a maximum of one month at a time after the initial trial.
- Compact feeds are not recommended as a first line choice, the 200ml feeds have an extra 75ml that can allow patients to sip over longer periods of time and can be kept in the fridge to increase palatability and tolerance. If compact ONS are provided on discharge, please ensure patients are referred to community dietitian.
Specialist Dietitian Oral Nutritional Supplements

Other feeds are only to be prescribed under the direction of dietitian recommendation as they require assessment and monitoring. They should not be continued long-term without assessments and only issued on acute prescription (not repeat).

The specialist ONS also includes pre-thickened supplements / puddings which may be required for patients with swallowing difficulties.

For any dietitian recommended feeds, a letter should be written to the GP to specify the reasons for the specialist feed, clear directions of use and quantity to be issued plus review date specified.

Any third-party requests for specialist ONS feeds should be confirmed with the patient that they are still required before issuing prescriptions.
